version: 1.0 last updated: 2025-03-19 09:00

CS Dungeon

Overview

Your task in assignment 2 is to create a dungeon crawler game, where you will get to design a map of connected dungeons filled with monsters, items, and a final boss at the end to defeat! You will get to play as either a Fighter or a Wizard, using your special skills and stats to defeat these monsters and beat the game!

The game consists of a setup phase, where you add dungeons and items, and a gameplay phase, where you as the player will get to move between dungeons, fight monsters and collect items that can make you even stronger!

You can read about the history of dungeon crawler games here.

Assignment Structure

This assignment will test your ability to create, use, manipulate and solve problems using linked lists. To do this, you will be implementing a dungeon crawler game, where the dungeons are represented as a linked list, stored within a map. Each dungeon contains a list of items. The map also contains a player struct, which also contains a list of items.

We have defined some structs in the provided code to get you started. You may add fields to any of the structs if you wish.

> **NOTE:**
>
> There are 5 structs used in this assignment. You do not need to know everything from the beginning, each stage of the assignment will walk you through what you need to know. The easiest way to understand these structs is to get stuck into **Stage 1.1** where you get to create some!

– Structs

`struct map`

- Purpose: To store all the information about the dungeon map. It contains the list of dungeons within the map, the player, and the number of points required to win the game. The `entrance` field is a pointer to the first dungeon in the list of dungeons.
- Defined in `cs_dungeon.h` .

`struct dungeon`

- Purpose: To store all the information about a single dungeon. This will form a linked list of dungeons by pointing to the next one (or `NULL`).
- Defined in `cs_dungeon.c` .

`struct item`

- Purpose: To store all the information about a single item. This will form a linked list of items by pointing to the next one (or `NULL`). Items can be stored in a dungeon and in the player's inventory.

- Defined in `cs_dungeon.c` .

`struct player`

- Purpose: To store all the information about the player.
- Defined in `cs_dungeon.c` .

`struct boss`

- Purpose: To store all the information about the final boss.
- Defined in `cs_dungeon.c` .

The following enum definitions are also provided for you. You can create your own enums if you would like, but you should not modify the provided enums.

– Enums

`enum monster_type`

- Purpose: To represent the different types of monsters that can be encountered in the dungeons.
- Defined in `cs_dungeon.h` .

`enum item_type`

- Purpose: To represent the different types of items that can be found in the dungeons.
- Defined in `cs_dungeon.h` .

> **HINT:**
>
> Remember to initialise every field inside the structs when creating them (not just the fields you are using at that moment).

Getting Started

There are a few steps to getting started with CS Dungeon.

1. Create a new folder for your assignment work and move into it. You can follow the commands below to link and copy the files.

```
$ mkdir ass2
$ cd ass2
```

2. There are 3 files in this assignment. Run the following command below to download all 3, which will link the header file and the main file. This means that if we make any changes to `cs_dungeon.h` or `main.c` , you will not have to download the latest version as yours will already be linked.

```
$ 1091 fetch-activity cs_dungeon
```

3. Run `1091 autotest cs_dungeon` to make sure you have correctly downloaded the file.

```
$ 1091 autotest cs_dungeon
```

> **WARNING:**
>
> When running the autotest on the starter code (with no modifications), it is expected to see failed tests.

4. Read through the rest of the introductory specification and **Stage 1**.

Starter Code

This assignment utilises a multi-file system. There are three files we use in CS Dungeon:

- **Main File (`main.c`):** This file handles **all input scanning and error handling** for you. It also tests your code in `cs_dungeon.c` and contains the `main` function. You don't need to modify or fully understand this file, but if you're curious about how this assignment works, feel free to take a look. **You cannot change `main.c` .**
- **Header File (`cs_dungeon.h`):** contains defined constants that you can use and function prototypes. It also contains header comments that explain what functions should do and their inputs and outputs. *If you are confused about what a function should do, read the header file and the corresponding specification.* **You cannot change `cs_dungeon.h` .**
- **Implementation File (`cs_dungeon.c`):** contains stubs of functions for you to implement. This file does not contain a `main` function, so you will need to compile it alongside `main.c` . *This is the only file you may change. You do not need to use `scanf` or `fgets` anywhere.*

> NOTE:
>
> **Function Stub**: A temporary substitute for yet-to-be implemented code. It is a placeholder function that shows what the function will look like, but does nothing currently.

The implementation file `cs_dungeon.c` contains some provided functions to help simplify some stages of this assignment. These functions have been fully implemented for you and should not need to be modified to complete this assignment.

These provided functions will be explained in the relevant stages of this assignment. **Please read the function comments and the specification as we will suggest certain provided functions for you to use.**

> WARNING:
>
> Do not change the return type or parameter amount and type of the provided function stubs. `main.c` depends on these types and your code may not pass the autotests otherwise, as when testing we will compile your submitted `cs_dungeon.c` with the supplied `main.c` .

> NOTE:
>
> If you wish to create your own helper functions, you can put the function prototypes at the top of `cs_dungeon.c` and implement it later in the file. You should place your function comment just above the function definition.

How to Compile CS Dungeon

– Compiling CS Dungeon

To compile you should compile `cs_dungeon.c` alongside `main.c` . This will allow you to run the program yourself and test the functions you have written in `cs_dungeon.c` . Autotests have been written to compile your `cs_dungeon.c` with the provided `main.c` .

To compile your code, use the following command:

```
$ dcc cs_dungeon.c main.c -o cs_dungeon
```

Once your code is compiled, you can run it with the following command:

```
$ ./cs_dungeon
```

To autotest your code, use the following command:

```
$ 1091 autotest cs_dungeon
```

Reference Implementation

To help you understand the expected behaviour of CS Dungeon, we have provided a reference implementation. If you have any questions about the behaviour of your assignment, you can check and compare yours to the reference implementation.

To run the reference implementation, use the following command:

```
$ 1091 cs_dungeon
```

– Example Usage

Once you have followed the setup prompts, you might want to start by running the `?` command, whether you are in the setup phase or the gameplay phase.

When in the setup phase, the `?` command will display what you can add to the map:

```
 $  1091 cs_dungeon
Welcome to the 1091 Dungeon!
This is a game where you get to create your own dungeon map, battle monsters and collect items!
Please enter the name of your map: Faerun
Please enter the amount of points required to win: 25
Please enter the player's name: Minsc
Player Class Options:
        Fighter
        Wizard
Please enter player's chosen class type: Fighter

----------Setup Phase----------

Enter Command: ?
======================[  1091 Dungeon  ]======================
      =============[    Setup: Usage Info   ]===============
  ?
    Show setup usage info
  q
    Exit setup stage
  a [dungeon name] [monster type] [num_monsters]
    Append a dungeon to the end of the map's list of dungeons
  p
    Prints the map's list of dungeons
  s
    Shows the player's current stats
  i [position] [dungeon name] [monster type] [num_monsters]
    Inserts a dungeon to the specified position in the map
  t [dungeon position] [item type] [points]
    Inserts an item into the specified dungeon's list of items
================================================================

Enter Command: Ctrl-D
Thanks for playing!
```

When in the gameplay phase, the `?` command will show you what actions the player can take:

```
 $  1091 cs_dungeon
Welcome to the 1091 Dungeon!
This is a game where you get to create your own dungeon map, battle monsters and collect items!
Please enter the name of your map: Faerun
Please enter the amount of points required to win: 25
Please enter the player's name: Minsc
Player Class Options:
        Fighter
        Wizard
Please enter player's chosen class type: Fighter

----------Setup Phase----------

Enter Command: a beach 1 1
beach has been added as a dungeon to the map!

Enter Command: q
Please enter the required item to defeat the final boss: 1
The final boss has been added to faerun!
Map of faerun!
|^|^|^|^|^|   |^|^|^|^|^|

1. beach
Boss: Present
Monster: Slime
Minsc is here

|^|^|^|^|^|   |^|^|^|^|^|

--------Gameplay Phase--------

Enter Command:?
=======================[  1091 Dungeon  ]=======================
      =============[  Gameplay: Usage Info  ]===============
  ?
    Show gameplay usage info
  q
    Exit gameplay
  p
    Prints the map's list of dungeons
  s
    Shows the player's current stats
  d
    Prints the current dungeon's details
  >
    Move to the next dungeon in the map
  <
    Move to the previous dungeon in the map
  !
    Physically attack monsters in current dungeon
  #
    Magically attack monsters in current dungeon
  P
    Activate the player's class power
  c [item number]
    Collect the specified item from current dungeon
  u [item number]
    Use the specified item from the player's inventory
  T
    Teleport to the furthest dungeon
  b
    Fight the boss in the current dungeon
================================================================

Enter Command: Ctrl-D
Thanks for playing!
```

The easiest way to understand how this assignment works is to play a game yourself! Below is example input you can try by using the reference solution.

– Example Game

```
Faerun
25
Minsc
Fighter
a cavern 1 3
a castle 2 2
a graveyard 3 3
t 1 0 5
t 1 0 3
t 2 1 5
t 2 3 5
t 2 3 5
q
1
```

Allowed C Features

In this assignment, there are no restrictions on C Features, except for those in the Style Guide. If you choose to disregard this advice, you must still follow the Style Guide.

You also may be unable to get help from course staff if you use features not taught in DPST1091/CPTG1391. Features that the Style Guide identifies as illegal will result in a penalty during marking. You can find the style marking rubric above. **Please note that this assignment must be completed using only Linked Lists . Do not use arrays in this assignment. If you use arrays instead of linked lists you will receive a 0 for performance in this assignment**.

Banned C Features

In this assignment, **you cannot use arrays for the list of dungeons nor the lists of items** and cannot use the features explicitly banned in the Style Guide. If you use arrays in this assignment for the linked list of dungeons or the linked lists of items you will receive a **0** for performance in this assignment.

FAQ

– FAQ

Q: Can I edit the given starter code functions/structs/enums?

You can only edit `cs_dungeon.c` .You **cannot** edit anything in `main.c` or `cs_dungeon.h` .

You **cannot** edit any of the parameters or names for the provided functions.

Q: Can I use X other C feature

A: For everything not taught in the course, check the style guide. If it says "Avoid", then we may take style marks off if its not used correctly. If it says "Don't Use" then we will take style marks off (see the style marking rubric).

Game Structure

This game consists of a setup phase and a gameplay phase.

You will be implementing both the setup phase and gameplay phase throughout this assignment, adding more features to both as you progress. By the end of **stage 1.4****you will have implemented parts of both setup and gameplay enough to play a very basic game.

The game is ended either by the user entering `Ctrl-D`, the win condition being met, or the player running out of health points. The program can also be ended in the setup phase with `Ctrl-D` or `q`.

Your Tasks

This assignment consists of four stages. Each stage builds on the work of the previous stage, and each stage has a higher complexity than its predecessor. You should complete the stages in order.

> **NOTE:**
>
> You can assume that your program will **NEVER** be given:
>
> - A non-existent command.
> - Command arguments that are not of the right type.
> - An incorrect number of arguments for the specific command.
>
> Additionally, commands will always start with a `char`. **All scanning and most printing will be handled for you in `main.c`, so you should not need to worry about the above.**

Stage 1 ●○○ | Stage 2 ●○○ | Stage 3 ●●○ | Stage 4 ●●● | Extension | Tools

Stage 3

In **Stage 3** of this assignment, you will be manipulating 2D linked lists by adding lists of items to the dungeons and to the player. You will also be managing your memory usage by freeing memory and preventing memory leaks.

Specifically, this will include:

- Ending the game.
- Adding items to dungeons in the setup phase.
- Collecting items in dungeons.
- Using items.
- Removing empty dungeons.

Stage 3.1 - Ending the game

Finally, we can end our game! Once the player has collected the point requirement (stored in `map-<win_requirement`) and has either defeated the final boss (handled in **Stage 4**), or defeated all other monsters, the player has won the game! If the player has run out of health points, they lose the game.

To win the game, players must collect the required points and either defeat all monsters or take down the boss-level monster.

The game is lost if the player's health drops to 0 or below.

To implement this, you will need to add more functionality to your `end_turn` function, as after each player turn, you should check to see if the game is over. At this point in the assignment, a turn is as follows:

1. player action
2. monster attacks
3. check if the game is over

In `end_turn`, you should return `PLAYER_DEFEATED` if their health points drops to 0 or less. You should return `WON_MONSTERS` if the player has defeated all monsters in the map and met the point requirement. You should return `WON_BOSS` if the player has defeated the boss and met the point requirement (fighting the boss will be handled in **Stage 4.2**).

Clarifications

- If the player both meets the win criteria (collecting the required points and defeating either all monsters or the boss monster) and runs out of health points in the same turn, the player loses the game (you can't win if you've been defeated - you need to be able to leave the dungeon!).
- Testing for this stage will only use maps with one dungeon.
- There may be some games that are impossible to win, however, you do not need to account for these cases.
- The game can still be ended by inputting `CTRL + D`, with no need to check if the player has won or lost.
- The boss-level monster is defeated when their health points reach 0.

Examples

– Example 3.1.1: Defeat all monsters in dungeon, win game

```
$ dcc cs_dungeon.c main.c -o cs_dungeon
$ ./cs_dungeon
Welcome to the 1091 Dungeon!
This is a game where you get to create your own dungeon map, battle monsters and collect items!
Please enter the name of your map: Faerun
Please enter the amount of points required to win: 9
Please enter the player's name: Minsc
Player Class Options:
        Fighter
        Wizard
Please enter player's chosen class type: Wizard

----------Setup Phase----------

Enter Command: a forest 3 3
forest has been added as a dungeon to the map!

Enter Command: q
Please enter the required item to defeat the final boss: 1
The final boss has been added to Faerun!
Map of Faerun!
|^|^|^|^|^|   |^|^|^|^|^|

1. forest
Boss: Present
Monster: Skeleton
Minsc is here

|^|^|^|^|^|   |^|^|^|^|^|

--------Gameplay Phase--------

Enter Command: #
A battle has raged!
Minsc the Wizard has won by collecting 9 points and defeating all monsters!
Thanks for playing!
```

– Example 3.1.2: Lose game

```
$ dcc cs_dungeon.c main.c -o cs_dungeon
$ ./cs_dungeon
Welcome to the 1091 Dungeon!
This is a game where you get to create your own dungeon map, battle monsters and collect items!
Please enter the name of your map: Faerun
Please enter the amount of points required to win: 9
Please enter the player's name: Minsc
Player Class Options:
        Fighter
        Wizard
Please enter player's chosen class type: Wizard

----------Setup Phase----------

Enter Command: a forest 4 2
forest has been added as a dungeon to the map!

Enter Command: q
Please enter the required item to defeat the final boss: 1
The final boss has been added to Faerun!
Map of Faerun!

Boss: Present
Monster: Wolf
Minsc is here

|^|^|^|^|^|   |^|^|^|^|^|

--------Gameplay Phase--------

Enter Command: s
=======Player Stats=======
Minsc is currently in forest
Wizard
Health Points: 15
Shield Power: 0
Damage: 7
Magic Modifier: 1.5
Points Collected: 0
Minsc has the following items in their inventory:
No Items

Enter Command: s
=======Player Stats=======
Minsc is currently in forest
Wizard
Health Points: 7
Shield Power: 0
Damage: 7
Magic Modifier: 1.5
Points Collected: 0
Minsc has the following items in their inventory:
No Items
Minsc has been defeated!
Thanks for playing!
```

NOTE:

You may like to autotest this section with the following command:

```
1091 autotest-stage 03_01 cs_dungeon
```

Stage 3.2 - Adding Items to Dungeons

In this stage, we can finally add items for the player to collect and use! Items are added in the setup phase.

```
Enter Command: t [dungeon_number] [item_type] [points]
```

- `dungeon_number` : which dungeon the item should be added to, indexed from 1.
- `item_type` : the `enum item_type` the new item is.
- `points` : the point value the item is worth when used.

There are two functions to implement for **Stage 3.2**, `create_item` and `add_item` . `create_item` will be similar to the create functions in **Stage 1.1**, where you will need to use `malloc` .

In this stage you will need to create a `struct item` , and add it to the dungeon indicated by `dungeon_number` (dungeons indexed from 1). Items should be added in the same order as listed in the enum, i.e.:

- Physical weapons
- Magical tomes
- Armor
- Health potions
- Treasure

If there is already an item of the same type, add it to the end of that type's section, e.g. if the list of items had:

1. Physical weapon
2. Armor
3. Treasure

A second physical weapon should be placed in the second position, becoming:

1. Physical weapon
2. Physical weapon (new item)
3. Armor
4. Treasure

> **WARNING:**
>
> When adding items, you may need to go back to previous stages to add item implementation.

Clarifications

- Refer to `cs_dungeon.h` to see what should be returned in the case of errors.

Examples

– Example 3.2.1: Basic item adding

```
$ dcc cs_dungeon.c main.c -o cs_dungeon
$ ./cs_dungeon
Welcome to the 1091 Dungeon!
This is a game where you get to create your own dungeon map, battle monsters and collect items!
Please enter the name of your map: Faerun
Please enter the amount of points required to win: 25
Please enter the player's name: Minsc
Player Class Options:
        Fighter
        Wizard
Please enter player's chosen class type: Wizard

----------Setup Phase----------

Enter Command: a forest 2 2
forest has been added as a dungeon to the map!

Enter Command: t 1 0 1
Item successfully added to the dungeon!

Enter Command: t 1 1 1
Item successfully added to the dungeon!

Enter Command: t 1 2 1
Item successfully added to the dungeon!

Enter Command: t 1 3 1
Item successfully added to the dungeon!

Enter Command: t 1 4 1
Item successfully added to the dungeon!

Enter Command: q
Please enter the required item to defeat the final boss: 1
The final boss has been added to Faerun!
Map of Faerun!
|^|^|^|^|^|   |^|^|^|^|^|

1. forest

Minsc is here

--------Gameplay Phase--------

Enter Command: d
======Dungeon Details======
Minsc is currently in forest
There are 2 Goblins
The boss is in this dungeon
        Health Points: 35
        Damage: 10
        Points: 20
        Required Item: Magical Tome
The dungeon forest has the following items:
1. Physical Weapon, worth 1 point(s).
2. Magical Tome, worth 1 point(s).
3. Magical Tome, worth 2 point(s).
4. Armor, worth 1 point(s).
5. Armor, worth 2 point(s).
6. Health Potion, worth 1 point(s).
```

```
Enter Command: Ctrl-D
Thanks for playing!
```

NOTE:

You may like to autotest this section with the following command:

```
1091 autotest-stage 03_02 cs_dungeon
```

Stage 3.3 - Collecting Items

Now we would like to be able to pick up these items and place them into the player's inventory!

```
Enter Command: c [item_number]
```

The player will specify which item from the dungeon they are currently in that they would like to pick up, by the `item_number` (items are indexed from 1).

The item selected should be moved from the dungeon's list of items to the player's list of items, inserted at the head of the player's list of items, so that it is first in their inventory.

Point value or item usage is not added to the player's stats (this will happen when the player uses an item).

There is one function to implement for **Stage 3.3**, called `collect_item`. This function returns an `int`; `INVALID_ITEM` should be returned when the `item_number` does not correspond to an item in the dungeon. Otherwise, `VALID` should be returned.

Clarifications

- Refer to `cs_dungeon.h` to check what should be returned in the case of errors.
- `INVALID` can also be returned instead of `INVALID_ITEM`.

Examples

– Example 3.3.1: Collecting items

```
$ dcc cs_dungeon.c main.c -o cs_dungeon
$ ./cs_dungeon
Welcome to the 1091 Dungeon!
This is a game where you get to create your own dungeon map, battle monsters and collect items!
Please enter the name of your map: Faerun

Shield Power: 0
Damage: 7
Magic Modifier: 1.5
Points Collected: 0
Minsc has the following items in their inventory:
1. Physical Weapon, worth 1 point(s).
2. Armor, worth 1 point(s).
3. Magical Tome, worth 1 point(s).

Enter Command: Ctrl-D
Thanks for playing!
```

NOTE:

You may like to autotest this section with the following command:

```
1091 autotest-stage 03_03 cs_dungeon
```

Stage 3.4 - Using Items

Now that we have items in the player's inventory, let's use them to make the player stronger and collect more points!

```
Enter Command: u [item_number]
```

In the `use_item` function, given an item number corresponding to an item in the player's inventory (indexed from 1):

1. stats should be added to the player's stats depending on the item and its point value.
2. The item's point value should also be added to the player's collected point score.
3. The item should be removed from the player's inventory and freed.

The item effects are listed below.

– Item Effects

Physical Weapons	Physical weapons should add to the player's damage by their point value.

Magical Tome	Magical tomes should add to the player's magic modifier by their point value divided by 10.0
Armor	Armor should add to the player's shield power by their point value divided by 2.
Health Potions	Health potions should add to the player's health points by their point value + 5. Health cannot exceed the constant, `MAX_HEALTH` .
Treasure	Treasure has no effect on the player's stats.

Clarifications

- `INVALID_ITEM` should be returned when the `item_number` does not correspond to an item in the player's inventory. Otherwise, `VALID` should be returned.

Examples

– Example 3.4.1: Using items, basic case

```
$ dcc cs_dungeon.c main.c -o cs_dungeon
$ ./cs_dungeon
Welcome to the 1091 Dungeon!
This is a game where you get to create your own dungeon map, battle monsters and collect items!
Please enter the name of your map: Faerun
Please enter the amount of points required to win: 25
Please enter the player's name: Minsc
Player Class Options:
        Fighter
        Wizard
Please enter player's chosen class type: Wizard

----------Setup Phase----------

Enter Command: a forest 2 2
forest has been added as a dungeon to the map!

Enter Command: t 1 1 1
Item successfully added to the dungeon!

Enter Command: t 1 0 1
Item successfully added to the dungeon!

Enter Command: t 1 2 1
Item successfully added to the dungeon!

Enter Command: q
Please enter the required item to defeat the final boss: 1
The final boss has been added to Faerun!
Map of Faerun!
|^|^|^|^|^|   |^|^|^|^|^|

NOTE:

You may like to autotest this section with the following command:

```
1091 autotest-stage 03_04 cs_dungeon
```

Stage 3.5 - Removing Empty Dungeons

Once a player has cleared out a dungeon and has left the dungeon, that dungeon should be removed from the map - there's no need to go back to it! A dungeon is clear when there are no monsters (including final bosses), no items, and the player is not in it.

You will need to add this to your `end_turn` function. At this point in the assignment, a turn is as follows:

1. Player action
2. Monster attacks
3. Remove any empty dungeons
4. Check if the game is over

WARNING:

In addition to modifying `end_turn`, you will also need to implement `free_map`, called for you in `main.c` on program end. From this stage onward, when the program ends, all `malloc`'d memory will need to be freed, and there should be no memory leaks. You should check for memory leaks by compiling with `dcc --leak-check cs_dungeon.c main.c -o cs_dungeon.`

Examples

– Example 3.5.1: Remove empty dungeons

```
$ dcc --leak-check cs_dungeon.c main.c -o cs_dungeon
$ ./cs_dungeon

```

Testing and Submission

Remember to do your own testing

Are you finished with this stage? If so, you should make sure to do the following:

- Run `1091 style` and clean up any issues a human may have reading your code. Don't forget -- **20%** of your mark in the assignment is based on style and readability!
- Autotest for this stage of the assignment by running the `autotest-stage` command as shown below.
- Remember -- *give early and give often*. Only your last submission counts, but why not be safe and submit right now?

```
$ 1091 style cs_dungeon.c
$ 1091 autotest-stage 03 cs_dungeon
$ give dp1091 ass2_cs_dungeon cs_dungeon.c
```

Assessment

Assignment Conditions

- **Joint work** is **not permitted** on this assignment.

  This is an individual assignment.

  The work you submit must be entirely your own work. Submission of any work even partly written by any other person is not permitted.

  The only exception being if you use small amounts (< 10 lines) of general purpose code (not specific to the assignment) obtained from a site such as Stack Overflow or other publicly available resources. You should attribute the source of this code clearly in an accompanying comment.

  Assignment submissions will be examined, both automatically and manually for work written by others.

  Do not request help from anyone other than the teaching staff of DPST1091/CPTG1391.

  Do not post your assignment code to the course forum - the teaching staff can view assignment code you have recently autotested or submitted with give.

  Rationale: this assignment is an individual piece of work. It is designed to develop the skills needed to produce an entire working program. Using code written by or taken from other people will stop you learning these skills.

- The use of **code-synthesis tools**, such as **GitHub Copilot**, is **not permitted** on this assignment.

  The use of **Generative AI** to generate code solutions is not permitted on this assignment.

  Rationale: this assignment is intended to develop your understanding of basic concepts. Using synthesis tools will stop you learning these fundamental concepts.

- **Sharing, publishing, distributing** your assignment work is **not permitted**.

  Do not provide or show your assignment work to any other person, other than the teaching staff of DPST1091/CPTG1391. For example, do not share your work with friends.

  Do not publish your assignment code via the internet. For example, do not place your assignment in a public GitHub repository.

  Rationale: by publishing or sharing your work you are facilitating other students to use your work, which is not permitted. If they submit your work, you may become involved in an academic integrity investigation.

- **Sharing, publishing, distributing your assignment work after the completion of DPST1091/CPTG1391** is **not permitted**.

  For example, do not place your assignment in a public GitHub repository after DPST1091/CPTG1391 is over.

  Rationale:DPST1091/CPTG1391 sometimes reuses assignment themes, using similar concepts and content. If students in future terms can find your code and use it, which is not permitted, you may become involved in an academic integrity investigation.

Violation of the above conditions may result in an academic integrity investigation with possible penalties, up to and including a mark of 0 in DPST1091/CPTG1391 and exclusion from UNSW.

Relevant scholarship authorities will be informed if students holding scholarships are involved in an incident of plagiarism or other misconduct. If you knowingly provide or show your assignment work to another person for any reason, and work derived from it is submitted - you may be penalised, even if the work was submitted without your knowledge or consent. This may apply even if your work is submitted by a third party unknown to you.

If you have not shared your assignment, you will not be penalised if your work is taken without your consent or knowledge.

For more information, read the UNSW Student Code , or contact the course account. The following penalties apply to your total mark for plagiarism:

0 for the assignment	Knowingly providing your work to anyone and it is subsequently submitted (by anyone).
0 for the assignment	Submitting any other person's work. This includes joint work.
0 FL for DPST1091	Paying another person to complete work. Submitting another person's work without their consent.

Submission of Work

You should submit intermediate versions of your assignment. Every time you autotest or submit, a copy will be saved as a backup. You can find those backups here , by logging in, and choosing the yellow button next to `ass2_cs_dungeon` .

Every time you work on the assignment and make some progress, you should copy your work to your CSE account and submit it using the `give` command below.

It is fine if intermediate versions do not compile or otherwise fail submission tests.

Only the final submitted version of your assignment will be marked.

You submit your work like this:

```
$ give dp1091 ass2_cs_dungeon cs_dungeon.c
```

Assessment Scheme

This assignment will contribute 25% to your final mark.

80% of the marks for this assignment will be based on the performance of the code you write in `cs_dungeon.c` .

20% of the marks for this assignment will come from manual marking of the readability of the C you have written. The manual marking will involve checking your code for clarity, and readability, which includes the use of functions and efficient use of loops and if statements.

Marks for your performance will be allocated roughly according to the below scheme.

100% for Performance	Completely Working Implementation, which exactly follows the specification (Stage 1, 2, 3 and 4).
85% for Performance	Completely working implementation of Stage 1, 2 and 3.
65% for Performance	Completely working implementation of Stage 1 and Stage 2.
35% for Performance	Completely working implementation of Stage 1.

Marks for your style will be allocated roughly according to the scheme below.

Style Marking Rubric

	0	1	2	3	4
Formatting (/5)					
Indentation (/2) - Should use a consistent indentation scheme.	Multiple instances throughout code of inconsistent/bad indentation	Code is mostly correctly indented	Code is consistently indented throughout the program		

Whitespace (/1) - Should use consistent whitespace (for example, 3 + 3 not 3+ 3)	Many whitespace errors	No whitespace errors			
Vertical Whitespace (/1) - Should use consistent whitespace (for example, vertical whitespace between sections of code)	Code has no consideration for use of vertical whitespace	Code consistently uses reasonable vertical whitespace			
Line Length (/1) - Lines should be max. 80 characters long	Many lines over 80 characters	No lines over 80 characters			
Documentation (/5)					
Comments (incl. header comment) (/3) - Comments have been used throughout the code above code sections and functions to explain their purpose. A header comment (with name, zID and a program description) has been included	No comments provided throughout code	Few comments provided throughout code	Comments are provided as needed, but some details or explanations may be missing causing the code to be difficult to follow	Comments have been used throughout the code above code sections and functions to explain their purpose. A header comment (with name, zID and a program description) has been included	
Function/variable/constant naming (/2) - Functions/variables/constants names all follow naming conventions in style guide and help in understanding the code	Functions/variables/constants names do not follow naming conventions in style guide and help in understanding the code	Functions/variables/constants names somewhat follow naming conventions in style guide and help in understanding the code	Functions/variables/constants names all follow naming conventions in style guide and help in understanding the code		
Organisation (/5)					
Function Usage (/4) - Code has been decomposed into appropriate functions separating functionalities	No functions are present, code is one main function	Some code has been moved to functions	Some code has been moved to sensible/thought out functions, and/or many functions exceed 50 lines (incl. main function)	Most code has been moved to sensible/thought out functions, and/or some functions exceed 50 lines (incl. main function)	All code h been meaningfu decompos into functions a maximu of 50 lines (incl. The main function)
Function Prototypes (/1) - Function Prototypes have been used to declare functions above main	Functions are used but have not been prototyped	All functions have a prototype above the main function or no functions are used			
Elegance (/5)					
Overdeep nesting (/2) - You should not have too many levels of nesting in your code (nesting which is 5 or more levels deep)	Many instances of overdeep nesting	<= 3 instances of overdeep nesting	No instances of overdeep nesting		
Code Repetition (/2) - Potential repetition of code has been dealt with via the use of functions or loops	Many instances of repeated code sections	<= 3 instances of repeated code sections	Potential repetition of code has been dealt with via the use of functions or loops		

Constant Usage (/1) - Any magic numbers are #defined	None of the constants used throughout program are #defined	All constants used are #defined and are used consistently in the code	
Illegal elements			
Illegal elements - Presence of any illegal elements indicated in the style guide	**CAP MARK AT 16/20**		

Note that the following penalties apply to your total mark for plagiarism:

0 for the assignment	Knowingly providing your work to anyone and it is subsequently submitted (by anyone).
0 for the assignment	Submitting any other person's work. This includes joint work.
0 FL for DPST1091	Paying another person to complete work. Submitting another person's work without their consent.

Allowed C Features

In this assignment, there are no restrictions on C Features, except for those in the style guide. If you choose to disregard this advice, you **must** still follow the style guide.

You also may be unable to get help from course staff if you use features not taught in DPST1091. Features that the Style Guide identifies as illegal will result in a penalty during marking. You can find the style marking rubric above. Please note that this assignment must be completed using only **Linked Lists** . Do not use arrays in this assignment. If you use arrays instead of lined lists you will receive a 0 for performance in this assignment.

Due Date

This assignment is due **Week 12 Friday 09:00am** (2025-04-11 09:00:00). For each day after that time, the maximum mark it can achieve will be reduced **by 5%** (off the ceiling). For example at:

- Less than 1 day (24 hours) past the due date, the maximum mark you can get is **95%**.
- Less than 2 days (48 hours) past the due date, the maximum mark you can get is **90%**.
- Less than 5 days (120 hours) past the due date, the maximum mark you can get is **75%**.

No submissions will be accepted at 5 days late, unless you have special provisions in place.
